

2. Cake Class

Once upon a time in a bustling city, there was a famous bakery named "Sweet Delights." The bakery had a variety of delicious cakes, and each cake had its unique flavor, size, and price. The bakery wanted to automate its operations by using Python. Design a Python class named **Cake** that represents the concept of a cake. Include appropriate attributes to store the flavor, size, and price, ... of the cake. Also, define a method called "describe()" that prints out the details of the cake.
