

5. Dictionary

Write a function that reads a text file and counts the frequency of each word, excluding common stop words such as "the," "and," and "is." Store the results in a dictionary and display the top 5 most frequently occurring words.

Expected Test Result:

```
# Sample text:
file_text = "The sky is blue. The sun is shining. The sky is
clear."

# Output after calling the function
Top 5 most frequent words:
1."sky" - 2 occurrences
2."blue" - 1 occurrence
3."sun" - 1 occurrence
4."shining" - 1 occurrence
5."clear" - 1 occurrence
```

Note: For each exercise you need to follow Functional Programming rules.
